Guidelines 01/2022 on data subject rights - Right of access

Feedback Report on Report Analysis

1. The information discussed within the documentation discusses important aspects on the rights of data and the use of data within a global scale

2. The rights of data and information discuss a great detail of information which addresses the important issues that is to do with data on a broader scale.

3. Information that is used discusses important info for organisations to understand which allow organisations to understand the important aspects of how the data is dealt within their organisations and outside the scope in which the data is used and intended for.

4. The descriptions and clauses that highlight the information based on data is quite an in depth view of the guidelines of information and it shows the overview and the depth of the requirements and regulations that is required of such organisation.

5. The way in which data and reports are dealt within organisations is still a topic of discussion in which organisations would still need to know a bit more, as how much information and data is shared before considering the report a valuable asset which organisations can retrieve a profit from it.

6. Reports that are created within organisations allow organisations to share the information that is based on both their expertise and skillsets within an industry.   Yet with this information a lot of time is spent creating something that is on a huge scale. Where do organisations go from seeing reports as an asset to seeing it as a documentation that is for reading purposes? The extent of information that is shared by organisations would require organisations to share so much information, that the importance of data is deemed very important.

7. Data is an asset. It is our voice; it is our knowledge which organisations create decisions based on the information that is displayed and written in the reports that are read by organisations, CEOS, employees and the extended audience.

8. The data we see, read and breathe each day is at the tip of our fingers through the touch of a button. The guideline discusses important aspects of data and its uses within organisations and the ability to understand the information that is shared on a global scale is going to allow organisations to establish reports and documents that allow everyone to read and interpret in order for organisations to create better decisions within their organisations.
