

Dear reader,

If we want to make Europe great, we need a solid base that we (entrepreneurs) can trust and build on! The success of a nation is driven by its power to innovate and stay ahead of the game. Now with the US proving to be a poor partner to us, we suddenly wake-up and see our technology dependance on the US. Why isn't the European tech sector in every home, every office and every government?

We need a very very strong EU tech sector and as such rules and laws are really really needed to put down the legal foundation that investors can build from. However, too tight rules make us weak and limit our ability to innovate and become a leading authority in the world. Too tight rules weakens us as a nation! We need a strong Europe, driven by cutting edge innovation!

Don't be afraid but embrace and let's just see what it will bring! Don't be (over) protective but take the offense!

This law is basically killing all blockchain innovation from Europe and gives the lead to other nations (again). Please don't be that stupid. Please let us not miss out on block chain technology!

Lets make Europe the greatest!
