Contribution template for personal date breach notification

- Ideally, points 12 to 19 should be automatically generated as soon as the company identification number is provided.
- Points 29 and 30 should be automatically generated by cross-referencing with the designations.
- Regarding point 68, I think it's more relevant to speak in terms of data volumes/thresholds.
- Regarding points 118 and 123: It should be a single interoperable service desk and not scattered sites to be filled in manually.

Please note that DPOs and CISOs have multiple incident reporting portals. I believe it is essential to move as much as possible towards a single service desk for data breaches, cyber attacks, health-impacting incidents, and DORA incidents.

And that everything should be redirected behind the scenes to the appropriate contacts. The more intuitive the service desk is, the more sense it will make. This would also allow for the pooling of member states' resources."

Thanks in advance,

Kind regards,

Valentin THEVENOT
