

To Whom It May Concern:

I strongly support the adoption of a standardized DPIA Template to streamline and centralize global DPIA processes. To enable cross-platform reporting, the template should minimize free-text entry and prioritize predefined selections/options to reduce errors and improve data consistency and reporting.

Recommendation: Use predefined selections for core reporting fields, with limited free-text fields for context and exceptions.

The following would support this recommendation:

- Improves data integrity and consistency,
- Enables standardized reporting and benchmarking,
- Reduces completion and review cycle time,
- Strengthens governance and auditability and
- Supports automation and control mapping.

I thank you in advance for your time in reviewing this recommendation.

Kind Regards,

Jay A. Scaramazzo,
